

Resource Sharing

We will follow guidelines for data and resource sharing in a manner that is consistent with the NIH statement on sharing search data (https://grants.nih.gov/grants/policy/data_sharing/).

Requests for samples or materials will be handled by the PIs. All decisions for the transfer of Program materials (reagents, tissues, etc.) will be made by the PIs, in consultation with the university's Offices of Technology Transfer and NIH Program Staff following establishment of a Materials Transfer Agreement (MTA).

Any newly developed iPSC lines will be made publicly available as well as any newly developed plasmids or lentiviral constructs (via Addgene).
